Office Action Summary

Art Unit: 2814

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-12 and 21-26, drawn to a semiconductor device, classified in Class 257, subclass 202.

II. Claims 13-20, drawn to a process for making a semiconductor device, classified in Class 438, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case unpatentability of the group II invention would not necessarily imply unpatentability of the group I invention, since the process of the group II invention could be used to make a product materially different than those of the group I invention. For example, a device without the storage medium in claim 21.

Because these inventions are distinct for the reasons given above and, as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
